Bandung, Indonesia

Abstract: This study examines the influence of audit committee composition, authority, resources and diligence toward financial reporting quality. This study uses explanatory research method and multivariate regression test to conduct the statistic testing. Data are collected directly from companies and authoritative bodies, i.e., annual report, audit committee charter and other publications. The result indicates a positive influence of the audit committee diligence on the financial reporting quality. This is revealed that audit committee meeting and audit committee voluntary disclosure are considered to improve the quality of financial reporting.

Key words: Audit committee, composition, authority, resources, diligence, financial reporting quality

INTRODUCTION

There are several definitions about financial reporting. For example, Drake and Fabozzi (2012) define financial reporting as an aggregate presentation of historical and current financial information about a company whereas Wild *et al.* (2009) refer to it as a means to communicate for the benefit of decision making in investment, credit and other business field. Financial reporting will report financial information about how a company is performing (Drake and Dingler, 2001). Financial reporting is a means to an end which its ultimate outcome is to improve the decision making. Financial reporting is considered as a lens to see the whole business (Williams *et al.*, 2010).

Financial reporting in Indonesia still has many problems to be solved. First of all, there are several listed companies' annual financial reports with qualified or even disclaimer opinion, consequently they get a warning from Indonesia stock exchange. Another problem is that the many peculiar transactions indicated in financial performance reported by listed companies, so that an investigation audit is conducted for it.

The delayed annual and interim financial report delivery to the authoritative body is yet another problem that makes several companies' trading is suspended in the stock exchange as the form of sanction. Besides, there are

many findings in financial transaction reports and analysis Center/Pusat Pelaporan dan Analisis Transaksi Keuangan (PPATK) related with peculiar financial reporting in some corporations and partnerships.

This low financial reporting quality is probably due to the ineffectiveness of the audit committee. This is shown in some phenomena. Based on Bapepam-LK research in 2012, it was discovered that 395 out of 458 listed public companies (93.60%) already disclosed their audit committee members but 27 companies only had 1-2 person's in their audit committee members which violated the Bapepam-LK rule No. IX. I.5 about audit committee establishment and working guidance. As a result, these 27 companies were sentenced.

Meanwhile, based on data from 2012 annual report, there were only 30% of audit committee members had accounting background (education or experience), 30% had nonaccounting background and the remaining had no clear background.

Another problem relates to the audit committee independence. There are many audit committee members who had a special relation with the company and it is contrary to the ideal condition that they must have no relation with stockholders, board of commissioner and board of director.

The poor function of audit committee is supposed to drive the low quality of financial reporting. This study examines the influence of audit committee (composition, authority, resources and diligence) toward the financial reporting quality.

Literature review

Audit committee: Ghillyer (2012) states that audit committees are operating committees staffed by members of the board of directors plus independent or outside directors. Audit committee has a responsibility to monitor the financial policies and procedures of the organization—specifically the accounting policies, internal controls and the hiring of external auditors.

Audit committee is one of several operating committees established by the board of commissioners and to some extent guided by the full range of broad responsibilities. It consists of only outside directors—giving it independence from management and should be composed of a special qualified group of outside directors who understand, monitor, coordinate and interpret the internal control and related financial activities for the entire board (Moeller and Witt, 1999).

According to Arens *et al.* (2014) this audit committee is a selected number of members of company’s board of directors whose responsibilities include helping auditors remain independent of management. Although, there is no world wide consensus on the composition of audit committees, the best practice is that the committee is made up of three to six members (Ali, 2014).

Briotta (2010) defines audit committee as a committee (or equivalent body) established by and amongst the board of directors of an issuer for the purpose of overseeing the accounting and financial reporting

processes of the issuer and audits of financial statements of the issuer. Briotta (2010) explains that if no such committee exists with respect to an issuer, the entire board of commissioners of the issuer will function as audit committee.

DeZoort *et al.* (2002) reveal there are four components of an effort to achieve audit committee effectiveness:

- Composition: expertise, independence, integrity, objectivity
- Authority: responsibilities, influence (derived from full board of directors, federal law and exchange listing requirements)
- Resources: adequate number of members; access to management, external auditors and internal auditors
- Diligence: incentive, motivation, perseverance

Audit committee composition, authority and resources are the basic inputs needed to achieve its effectiveness (DeZoort *et al.*, 2002). These foundation inputs go into the diligence which is the primary process factor needed to achieve effectiveness (DeZoort *et al.*, 2002). This framework is used in this study (Fig. 1).

Audit committee composition: Audit committee composition refers to the requirement of “right people” as audit committee members with two main facets: independence and competencies (Bedard and Gendron, 2009). Usually, there is a requirement that audit committee must be composed of at least three independent, financially literate directors, one of whom must have accounting or related financial-management expertise (DeZoort *et al.*, 2002). The ultimate objective of such requirement is to enable the audit committees to make judgments that are in the best interests of shareholders (i.e., independence is required so as to promote

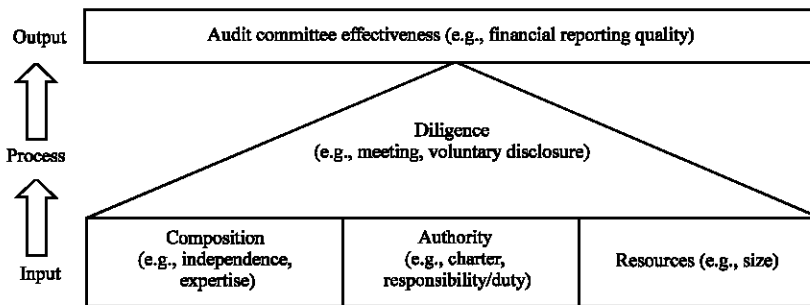

Fig. 1: Components of an effort to achieve audit committee effectiveness (DeZoort *et al.*, 2002)

objectivity on the part of audit committee members) (DeZoort *et al.*, 2002). It is also as an effort to restore investor's confidence in the wake of various financial reporting scandals (Owens-Jackson *et al.*, 2009).

Committee members must have no relationship to the company that may interfere with the exercise of their independence from management and the company. In addition, the audit committee must include at least one member with financial expertise designated as the financial expert (Vera-Munoz, 2005). Thus, audit committee must have the "right people" as members with member qualifications such as independence and expertise (Bedard and Gendron, 2009).

Audit committee authority: Audit committee authority is a function of the audit committee responsibilities and influence on management and auditors (Van Der Nest, 2008). It is derived from the full board of commissioners, law and exchange listing requirements (DeZoort *et al.*, 2002). Authority refers to formal responsibilities where audit committee is made accountable and endowed with the authority to intervene. These audit committee responsibilities are generally stated in a formal charter (the audit committee charter) which provide legitimate capacity to intervene (Bedard and Gendron, 2009).

The audit committee charter has become an increasingly important document for helping audit committee members to focus on their specific responsibilities and for helping stakeholders to assess the role and responsibilities of audit committee. Audit committee authority (influence) also depends on the audit committee's relationships with management, external and internal auditors and the board as a whole (DeZoort *et al.*, 2002). However, it is important to be realized that all mandatory responsibilities documented in audit committee charter always have the risk exposure of becoming ritualistic (Bedard and Gendron, 2009).

Audit committee resources: Because of the comprehensive responsibilities scope and the complex nature of the accounting and financial matters reviewed, the audit committee needs significant resources, e.g., number of commissioners involved on the committee, monetary resources to hire consultants for advice and informational resources (Bedard and Gendron, 2009). The audit committee must have adequate resources to do its job. Adequate number of committee members is needed to generate substantive discussion and to consider emerging issues as well as access to management, external auditors, internal auditors, the full board and legal counsel (DeZoort *et al.*, 2002).

Recent regulations stipulate that audit committee of a company should comprise of at least three members. This minimal threshold is seen as ensuring appropriate monitoring through diversity of expertise. The benefits of additional members must be weighed against the incremental costs of poorer communication, coordination, involvement and decision-making associated with larger groups. The objective is to have an audit committee not so large as to become unwieldy but sufficiently large to ensure appropriate monitoring (Bedard and Gendron, 2009).

Audit committee diligence: Diligence refers to the willingness of committee members to work together as needed to prepare, ask questions and pursue answers when dealing with management, external auditors internal auditors and other relevant constituents. The audit committee member's will to act is the most important component of an effort to achieve an effective audit committee (DeZoort *et al.*, 2002). Expertise, independence, authority and resources as the input components will not result in effectiveness unless the audit committee conducts the mechanisms by which all inputs are translated into organizational outcomes (Bedard and Gendron, 2009). Audit committee must be diligent in working to serve the best interests of stakeholders (DeZoort *et al.*, 2002).

Diligence is considered a process factor which is required for an effective audit committee. Diligence is the desire of audit committee members' to carry out their monitoring roles and include factors such as the number of board meetings and the behavior of individual which include preparation before meetings, attentiveness and participation and post-meeting follow-up but the factor that is publicly observable is the number of board meeting (Lary and Taylor, 2012).

Diligence can be observed from six proxies, i.e., agenda, meetings, questioning, relationships, power and leadership (Bedard and Gendron, 2009). The number of meetings held is an observable proxy to the degree of effort the audit committee exerts in overseeing financial reporting (He *et al.*, 2009). Every important activity should be disclosed to signal that the audit committee works well. Thus, another important proxy to audit committee diligence is audit committee voluntary disclosure.

Financial reporting quality: Stice and Stice (2012) state that the purpose of financial reporting is to aid interested parties in evaluating a company's past performance and in forecasting its future performance.

The information about past events is intended to improve future operations and forecasts on future cash flows.

According to Jonas and Blanchet (2000) there are two approaches related to financial reporting quality as described.

Users need approach: This approach tend to focus on valuation-related issues. Under the user need category, the quality of financial reporting is determined in relation to the usefulness of the financial information to the user (broadly defined as investors and creditors) of that information.

Shareholders/investors protection approach: This approach tends to focus more on corporate governance and stewardship-related issues. Under the shareholder protection category, the quality of financial reporting is defined primarily in relation to providing shareholders with full and transparent financial information that is not designed to obfuscate or mislead users (Jonas and Blanchet, 2000).

The objectives of each approach are not necessarily mutually exclusive, in many respects, they reinforce each other (Jonas and Blanchet, 2000).

Cohen *et al.* (2004) explain that the notion of financial reporting quality remains a vague concept. Financial reporting is another term for financial accounting (Anthony *et al.*, 2011). In financial accounting quality, there are five quality approaches, i.e., GAAP quality; audit quality; GAAP application quality; transaction quality and disclosure quality (Penman, 2007). This study uses the last approach by operationalizing qualitative characteristics both fundamental and enhancing qualities.

The fundamental qualitative characteristics (i.e., relevance and faithful representation) are most important and determine the content of financial reporting information. The enhancing qualitative characteristics (i.e., understand ability, compar ability, verifi ability and time liness) can improve decision usefulness when the fundamental qualitative which include characteristics are established.

In order to achieve a high quality of financial reporting, the acceptable accounting methods, the amount and types of information to disclose and the format in which to present it are chosen depend on which alternative provides the most useful information for decision-making purposes (decision-usefulness). Regardless of the classification, each qualitative

characteristic contributes to the decision-usefulness of financial reporting information (Kieso *et al.*, 2014). Characteristics that make information use ful are relevance, reliability, completeness, time liness, understand ability and verifiability (Fitriati and Mulyani, 2015).

Mackenzie *et al.* (2012) state that qualitative characteristics consist of fundamental and enhancing characteristics where fundamental qualitiesen compass relevance and faithful representation while enhancing qualities encompass comparability, verifiability, timeliness and understand ability. Beyersd off *et al.* (2013) also explain that fundamental and enhancing qualities are the most valuable information for capital providers. The qualities that make accounting information useful have been designated its “qualitative characteristics” (Carmichael *et al.*, 2007). These characteristics are the attributes that make information useful to users (Gaffikin, 2008). Subramanyam and Wild (2009) call these characteristics as desirable qualities of accounting information. Information with criteria such as relevant, reliable, complete, timelines, understandable, verifiable and accessible is classified as a high quality infomation. The usefulness of this high quality information depends on the user.

The influence of audit committee composition, authority, resources and diligence toward financial reporting quality: One form of audit committee effectiveness is a high quality of financial reporting. The audit committee has a significant impact in reducing the likelihood of fraud and restatements, so that there must be frequent communication between the auditor, the audit committee and the board. Communications between the audit committee and the auditor must include discussions of areas susceptible to earnings management. The auditor and the audit committee should discuss factors that are not included in the financial statements that might drive managers to make aggressive accounting choices such as analyst forecast data (Cohen *et al.*, 2007). Thus, audit committee (composition, authority, resources and diligence) will influence the financial reporting quality.

The first potential factor that can affect the financial reporting qualityis the audit committee composition. Composition of the audit committee has been the focus of many governance reform efforts (Beasley and Salterio, 2001). Audit committees with independent members appear to be more active, more involved in audit committee functions and less likely to be involved in actions that impinge on the quality of financial reporting (Van Der Nest, 2008). Aggressive earnings management is

negatively associated with financial and governance expertise of audit committee members and with independence of the committee (Owens-Jackson *et al.*, 2009). Independent audit committee members and audit committee financial experts are positively related to factors expected to improve the financial reporting process (Felo and Solieri, 2009). Thus, the first hypothesis is formulated as follows:

- H₁: audit committee composition has a positive effect on financial reporting quality

The second factor potentially affecting the financial reporting quality is audit committee authority. Audit committee authority can be grouped into three categories: oversight of external communications, monitoring of the internal control system and oversight of the external auditor. While, the requirements of laws and regulations have traditionally emphasized the oversight of financial reporting and external auditing, recent regulatory reforms have extended audit committee authority to internal control systems and expanded its oversight responsibilities regarding external communications and external auditing (Bedard and Gendron, 2009). There are five key authority are as identified, namely financial reporting, risk management, governance, internal control and the evaluation of the audit process (Bedard *et al.*, 2004; Van Der Nest, 2008). The main audit committee authority is to oversight the financial reporting. Thus, the second hypothesis is formulated as follows:

- H₂: audit committee authority has a positive effect on financial reporting quality

The third factor is the audit committee resources. One of observable resources of audit committee is the audit committee size. There are mixed findings in various studies relating to the impact of audit committee size on financial reporting quality where out of 27 studies, only six find a positive association, five a negative one and the sixteen other no significant association (Bedard and Gendron, 2009). However, audit committee was considered as a significant variable in explaining the likelihood of quarterly earnings management (Yang and Krishnan, 2005), of earnings restatement (Lin *et al.*, 2006) and of qualified audit opinion in annual report (Martinez and Fuentes, 2007). A limited number of audit committees indicates an essentially dysfunctional committee (Van Der Nest, 2008). Thus, the third hypothesis is formulated as follows:

- H₃: audit committee resources has a positive effect on financial reporting quality

The last factor is the audit committee diligence which can be shown in audit committee meeting and voluntary disclosure. Several studies have examined the relationship between audit committee meetings and financial reporting quality. Farber (2005) found that fraud firms had less frequent audit committee meetings than non-fraud firms in a year preceding the fraud is revealed but in 3 year after, fraud firms conducted audit committee meetings more frequent than non-fraud firms. With regard to restatement (one of the proxies for low reporting quality), Abbott *et al.* (2004) found that firms with audit committee meetings at least four times a year were less likely to have prior period financial statement restatement. Thus, the fourth hypothesis is formulated as follows:

- H₄: Audit committee diligence has a positive effect on financial reporting quality

MATERIALS AND METHODS

The research object at the center of attention in this study is audit committee (composition, authority, resources, diligence) and financial reporting quality. The research method is explanatory method which is done to obtain a description, picture or depicting system atically, factual information about the nature of and the relationship between variables studied (Sekaran and Bougie, 2013). The main reason of using this method is to find empirical facts about audit committee (composition, authority, resources, diligence) as factors that can cause a particular phenomenon related to the low quality of financial reporting.

Sample and data collection: Population is the entire group of people, events, or things that the researcher desires to investigate. The population of this study is comprised of 511 listed corporation in Indonesia Stock Exchange for 2014.

Sampling is the process of selecting items from the population so that sample characteristics can be generalized to population. Sampling consists of decision in design choice and sample size.

Sampling technique designed in this research is probability sampling-simple random sampling. The sample is chosen randomly without any group level concerns and every item has the same probability to be chosen (Sekaran and Bougie, 2013).

The minimum sample size is 84, calculated based on the sloving equation as follows:

$$n = \frac{N}{1 + Ne^2}$$

Where:

n = Sampel size

N = Population size

E = Tolerable error term (10%)

The 87 companies is already chosen for the actual sample in this research. Data are collected directly from 87 companies and also from the authoritative bodies (Indonesia stock exchange and financial service authority). In order to maintain the data validity, the measurement is conducted by three raters and only the same result of measurement is used.

Variable operationalization: Measurement for every variable is conducted based on the variable operationalization Table 1.

Data analysis: The purpose of this study is to examine whether audit committee (composition, authority, resource and diligence) have an influence on financial reporting quality. The independent variable audit committee (composition, authority, resource and diligence) is measured in a ratio scale. The dependent variable financial reporting quality is measured in an ordinal scale. So, it needs to be upgraded to an interval scaleusing the Method of Successive Inverval (MSI). The following cross-sectional regression model with an Ordinary Least Squares (OLS) technique is used to test the influence of audit committee (composition, authority, resource and diligence) toward financial reporting quality.

$$FRQ = \alpha + \beta_1 ACC + \beta_2 ACA + \beta_3 ACR + \beta_4 ACD + e$$

The proxy and measurement of each variable is defined in the variable operationalization (Table 1). USTATA 12.0 is used as an analysis tool to develop the cross-sectional regression model. A robust option is already used for estimating the standard errors and passing the classic assumption test.

RESULTS AND DISCUSSION

The multivariate regression analysis gives the following result in Table 2. As shown in Table 2, the F-statistic of the model is significant ($p < 0.00001$) indicating that a subset of the independent variables does explain the variation in Financial Reporting Quality (FRQ). The value of R^2 is 0.4020 indicating that about 40% of the financial reporting quality variance can be explained by independent variables in the model.

Audit Committee Diligence (ACD) is a significant variable which influence financial reporting quality (at 1% level). The result suggests the audit committee diligence is more likely to increase the financial reporting quality of the company. It supports that the audit committee meeting is important process to be considered for enhancing the financial reporting quality. Audit committee meeting can be held in both face-to-face meeting and teleconference meeting, so every participant can discuss anything planned in the agenda. A private meeting with the external and internal auditor, without management being present is very suggested to find a fact objectively, e.g., their relation with the management and management's competencies (Bedard and Gendron, 2009).

Formal and informal process is proven very important for the audit committee to conduct its duty and responsibility (Turley and Zaman, 2007). Audit committee voluntary disclosure is an important means to signal that every process, both formal and informal is done well. The reports of the audit committee can lend more credibility to audit financial statements by affirming that: financial statements present fairly in conformity with GAAP; financial statements fairly reflect the company's financial conditions and performance; the financial audit are thorough and there were no conflicts of interest that could possibly impair the auditors' independence (Rezaee *et al.*, 2003).

The regression result also indicates that Audit Committee Composition (ACC), Authority (ACA) and Resources (ACR) are not significant in influencing FRQ. On the other hand, the positive coefficient of audit committee composition, authority and resources is consistent with the prediction in the literature which implies that input factors in an effort to achieve audit

Table 2: Result of multivariate regression for estimating FRQ n = 87

Item	Parameters	Estimate	SE	p> t
Constanta	α	0.8009943	0.1097661	0.000 ***
ACC	β_1	0.0344876	0.0735716	0.640
ACA	β_2	0.0390168	0.0519445	0.455
ACR	β_3	0.061153	0.0821545	0.459
ACD	β_4	0.1276893	0.0258902	0.000 ***
R^2		0.4020		
Probability F		0.0000***		

committee effective ness has a positive association with financial reporting quality. This result may be explained by the fact that information about audit committee composition, authority and resources reported by the company in annual report and website is not in the same format so it is not comparable for the content analysis. Besides, the input factors among the company is indifferent each other with very little variance. Every company reports their ideal desirable inputs of audit committee to the public.

CONCLUSION

This study provides empirical evidence on the important role of audit committee as one of the corporate governance mechanism, in ensuring the financial reporting quality. The finding shows that the audit committee diligence may increase the quality of financial reporting. In Indonesia, audit committee diligence is proven as a significant factor that can influence financial reporting quality. Thus, companies should perhaps evaluate how to further improve audit committee diligence in order to enhance the quality of financial reporting.

LIMITATIONS

There are some limitations in this study that should be considered when interpreting the results. First with regard to the design of this study, the data are collected from externally available information (annual report and website). There is a possibility that audit committee component and financial reporting quality presented in the annual report and website does not reflect the actual practices. Further research is suggested to use other measurements by in depth interview to depict this true fact from the company. Second limitation is the window period. This research is a crosssection research that uses data from 2014 annual report and information published in website in 2015. Thus, further research may perform a longitudinal analysis to capture more complex factors that influence financial reporting quality. Another limitation is the measurement developed in this research. Probably, there are other aspects of audit committee and financial reporting quality that have not been addressed by this study. Then, further research can explore other alternative measurements for audit committee and financial reporting quality.

ACKNOWLEDGEMENTS

We would like to thank Poppy Sofia Koeswayo and Nanny Dewi Tanzil (Universitas Padjadjaran) for their very helpful support to finish this research.
