

Microfinance Banks and Performance of Small and Medium Scale Enterprises in Nigeria

Okafor Chukwuma Onwuagana
Baze University, Abuja, Nigeria

Key words: Microfinance, microfinance banks, small and medium-scale enterprise

Abstract: The relevance of small and medium enterprises to growth and development of any nation's economy cannot be over-emphasized. Small and medium enterprises development through effective means of bank financing have brought about debate and increase in interest among researches, policy makers and entrepreneurs which have led to issues being raised in identifying the large impact of the sub-sectors to economic growth. Small and medium scale enterprises make up the basis of industrial growth and development. The issues of microfinance bank financing is an issues that has to be treated with much importance as previous evidence shows that finance contributes to about to 25% of the success of small and medium enterprises. In order to evaluate the impact of microfinance banks on the performance banks on the performance of small and medium scale enterprises in Nigeria, questionnaires were administered to SMEs operators and microfinance bank officials. This research project had certain objectives which was achieved through the two hypothesis that were tested and questions that will be asked after which conclusion were be drawn and recommendation given. This research project made use of primary data. The conclusion has drawn at the end of this research shows that there is a significant relationship between microfinance bank and SMEs. To foster economic development, microfinance should effectively and efficiently fund small and medium scale enterprises in Nigeria an economy.

INTRODUCTION

Small and medium scale enterprises play a crucial part in providing medium scale and small-scale customers with specialized services. Above all, they provide people, particularly in Nigeria with the main source of income and employment that contributes to poverty alleviation. Small and medium businesses do not survive long

because they lack the necessary financial services; their financial resources are limited. There were therefore personal savings, business partners, friends, families and other relaxed funding sources before microfinance banking became established in 2005.

In the mission to allow small and medium-sized businesses to grow to develop and expand their businesses by public and investment banks, microfinance banks were

introduced, for example with financial services such as savings, professional advice and loans. But do the microfinance banks carry out their duties? What are the financial relations between SMEs and Microfinance Banks? The research is aimed at finding out what impact Microfinance banks can have on the financing of SMEs, so that, their performance can be enhanced and the economy developed opposes that small and medium scale businesses perform a very vibrant part in emerging economies for development.

Osamwoniyi and Tafamel^[1] SMEs are the cornerstones of a growing economy. According to a study conducted by Debbie it was shown that Small and Medium-sized Enterprises (SMEs) represent around 97% of Nigerian enterprises and generate around 50% of the jobs as did 30% of the production output. The definition of SMEs cannot be over emphasized; it differs among countries and also alongside time reliant on the pattern, phase of development and government policy of a particular country.

SMEs are defined by the National Council of Industries as enterprises in which overall costs exclusive of landed property is not <2 million naira (N2, 000,000). According to the Federal Ministry of Industry ACT (FMI) (1979), SMEs consist of a capital investment company with a total of 2 million naira (N2, 000, 000) and the figure of employees of up to 50, 50 people. The advent of SMEs is equivalent to the advent of entrepreneurs because SMEs are used to foster entrepreneurship. However, small and medium-scale enterprises are acknowledged as a driver of the country's progress and poverty alleviation.

Many researchers have tried to determine the role of the microfinance banks to improve their performance SMEs by providing them with financial means that will assure their performance. However, diverse limitations on small and medium-sized business were reduced and nearly all the attention was paid to big business. The financial services provided by the lending banks are also virtually in favour. Most lending banks in Nigeria have problems providing SMEs as they say SMEs do not meet their bank's requirements. Microfinance banks have the ability and capability to stabilize this problem and all this will be shown in the process of this research.

In addition, this research will demonstrate the success of microfinance banks with regard to the availability of funding assistance, lending size and frequency. Furthermore, the study shows the rate at which small medium-sized businesses are being charged by microfinance banks for finance.

Virtually, the dominant struggle of the Small Medium scale Enterprises are the issues of finance, manpower management and provision of the necessary document for obtaining in credit. This research will show the involvement of the lending banks demonstrating the best opened to SMEs to that source

of credit are the most useful to the SMEs and how important they are to the performance of the businesses.

Literature review: In Nigeria and many other countries, different researchers have defined SMEs in different ways, based on asset size or sum, the total figure of workforce and yearly proceeds. Consequently, the universal definition of medium-sized small businesses is not available. However, there is a high degree of uniformity of opinion when defining small and medium scale enterprises in term of value of assets than on any other basis^[2]. As a result of this doubt of an economic downturn occurring, the digit of employees and the impact on turnover is greater than the impact on the asset value. Small and Medium scale Enterprises (SMEs) are subdivided into Small Scale Enterprises (SSE) and Medium Scale Enterprises (MSE).

The apex financial intuition of Nigeria in its 1990 Credit Guideline for monetary institution describes small businesses as those whose annual yield does not go beyond N200, 000,000 or capital expenditure does not surpass N200, 000,000, exclusive of land costs. Though, the CBN recently placed small-scale enterprise employment levels below 50 and medium-scale enterprises below 100. As far as assets are concerned, small scale is less than N1, 000,000 while medium scale is less than N150, 000,000^[3].

A small business can be described as a corporate responsibility owned, successful and controlled by no more than twenty entrepreneurs with no >20 employers an undistinguishable organizational structure and a moderately small market share. SMEs whose annual revenue does not go further than N2 million to the net holding value of the company and Allied Matter Decree (CAMD) No I of 1990 Section 376 subdivision 2 are distinct as a company with a net holding value not higher than N1 millions. Small businesses with fewer than 300 workforces and with totality assets of a lesser amount than \$15 million are identified by the International Finance Corporation. Smaller companies with <20 employees are defined in smaller economies. In Nigeria, SMEs with an overall employed capital of up to N1.5 but not over N200 million as well as employed capital, except with no land costs and/or with employees exceeding N10 and no >300, define small and medium-sized businesses.

Obitayo^[4] believes that the transformation of small businesses over a timeframe is based on the advancement stage of a country is largely dependent upon.

Overview of microfinance banks in Nigeria: The microfinance industry in Nigeria has been threatened by abundant trials, since, the Microfinance Policy Framework in December introduction in 2005, thus, a substantial number of newly certified microfinance banks were established and operated as mini- deposit money banks, however, some improvement was revealed based

on the valuation of the microfinance sub-sector, next the introduction of the plan. These comprise penetrating consciousness among participants such as government, supervisory specialists, stakeholders, progression partners, financial institution and practical support provides on microfinance.

As of the Central Bank of Nigeria licensed a total of 882 microfinance banks while a large fraction of Nigeria were omitted from monetary services, despite the above improvements. A December, 2018 report supported by Enhancing Financial Innovation and Access shows that 32,9 million which represents 46,3% of Nigeria's adults were disqualified from financial aid. Of the 53.7% who had entrance, 36.3% had financial support from recognized financial institutions and 17.4% had absolute access to the informal sector. Among the 53.7% accessed, 36.3% developed financial help from registered financial institutions while 17,4% visited the easy sector absolutely as a consequence, the informal financial institution largely reduced access to loan-capable assets.

According to CBN^[5], Nigeria has traditionally been experienced in several centuries as a effect of microfinance. The outdated foreword of microfinance offers access to low-wage rural and urban lending. The majority of microfinance providers comprise saved collectors and cooperative Societies which are unauthorised self-Help Groups (SHGs) or the Rotating Saving and Credit organisations (ROSCAs) are not authorized.

Theoretical framework: The Agency Theory: according to Jensen and Meckling^[6] it was built on the disagreement between stakeholders and management of firms and the debt holders. Lending and borrowing are financing contracts that build financial responsibility between two parties. Since, SMEs are commonly owner-managed, they are not expected to be compressed significantly by the disagreement between. Stakeholders and managers. Therefore, the supply of funds to the business is based on contracts that form appropriate incentive for both the supplier and the fund users. The agency dispute between the owners and liability holder may be principally strict for SMEs^[7]. Thus contractual resistances can occur because of moral hazard, asymmetric information.

Empirical framework: Small-scale industries account for a higher proportion of the list of all Nigerian organizations and their survival for a stretched time. The mainstream of the small industry advanced from cottage industries, small and medium-sized to large-scale industries. Basil^[8] noted that majority SMEs in Nigeria liquidate within their earliest five year of operation due to inadequate capital structure, absence of motivation, poor market investigation in excess of attentiveness on one otherwise two markets for completed goods, lack or non-

functioning of continuation plan, lack of experience, unbalanced electricity supply, insufficiencies amenities (water, roads, etc.) improper records, failure to distinct corporate and private or individual assets, lack of business plan, failure to differentiate between takings and yield, failure to acquire the precise plant and machinery, inability to involve or hire competence workforce.

Aremu and Adeyemi^[9] it has shown that their surveys have shown that in their first 5 years of survival, some SMEs die mostly in Nigeria. It has also been found that fewer small businesses go to disappear in the sixth and 10th years while only about 5-10% of young firms endure, succeed and mature.

Oluloba criticised the poor functioning of the Nigeria small scale enterprises on reduced administration performance, inability to get funds, little equity contribution from investors of the organisation, poor infrastructural services, scarcity manpower managerial skills, variety of legalising agencies and the arrogant functioning environment, social and attitudinal difficulties, slight or no entrance to marketplace and lack of access to important information.

MATERIALS AND METHODS

The sampling technique that would be engaged in this study is the stratified sampling method. The micro finance banks selected are Lapo Micro-finance Bank Ltd., Microcred Micro-finance bank and Accion Micro-finance bank. The total estimated population that would be used to calculate the number of respondent needed for the study is 240^[10].

The research will be carried out with the use of questionnaire to scrutinize the connection that exists amid microfinance banks and the performance of SMEs. The data presentation in the course of the project will be done in correlation method via. the Statistical Product and Service Solution (SPSS) Software package. Sample size of the research will be determined by means of the statistical formula cited in Adebayo that is the Taro Yamane's formula will be employed. TARO Yamane's equation:

$$n = \frac{N}{1+a^2N}$$

Where:

N = Population of study

n = Sample size

a = Level of significant or error of tolerance

n = 150 respondent

Therefore, N = 240, a = 5% or 0.05, n = ?

Data presentation and analysis

Reliability test: The rule of thumb states that the research work is proven reliable if the Cronbach alpha is larger than or equivalent to 0.7. Therefore, the table above shows that the study is dependable as the Cronbach alpha is >0.7 (Table 1).

Analysis of data: A sum of 150 questionnaires was granted for the purpose of this research. These questionnaires were given to small and medium scale enterprises operators and 3 selected microfinance banks namely Lapo Microfinance Bank, Accion Microfinance Bank and Microcred Microfinance Bank. Out of the 150 questionnaire administered, 134 were returned and 16 questionnaires were unable to be retrieved.

Descriptive analysis of personal data: Table 2 reveals that 89.3% of the research questionnaires distributed were retrieved and 10.7% were not retrieved, this indicates that a reasonable conclusion can be drawn from the responses gotten from this research.

From Table 3, it is practical that 45(33.6%) of the respondent businesses operate sole proprietorship businesses, 39(29.1%) of the respondents are into partnership business, 17(12.7%) of the respondents have their family businesses, 18(13.4%) of the answerers are from private limited companies, 12(9%) of the respondents are from the public limited companies while 3(2.2%) of the respondents are members of the cooperatives. Therefore, bulks of the answerers are concerned in sole proprietorship businesses.

From the frequency Table 4, it shows that 58(43.3%) of the answerers were male which constitutes a lower number of respondents while 76(56.7%) females. It implies that there are supplementary female answerers than male.

From Table 4 showing the age allotment of the answerers, it shows that 45 (33.6%) of the answerers falls within the age bracket of 21-30, 49 (36.6%) falls within the age range of 31-40, 34 (25.4%) falls within the age range of 41-50, while 6 (4.5%) of the respondents falls within the age range of 51 and above. This shows that the greater percentage of respondents falls within ages of 31-40 (Table 5)

Table 6 shows the marital rank of respondents, the result of the analysis indicates that 38(28.4%) of the respondents are single, 69(51.5%) of the respondents are married, 15(11.2%) of the respondents are divorced while 12(9%) of the respondents are widowed. This shows that a superior fraction of the answerers are married.

Table 7 shows the religion of the answerers, 90(67.2%) of the respondents are Christian, 35(26.1%) of

the respondents are from the Islamic religion while 9(6.7%) of the respondents are based on other religions. This shows that mainstream of the answerers are Christian.

Table 8 shows the period for which businesses of answerers have been existing, 30(22.4%) of the answerers organisation have been existing for fewer than 5 years, 48(35.8%) of the respondent businesses have been existence between the period of 5-10 years, 31(23.1%) of the respondents businesses have been in existence between the period of 11-15 years, 9(6.7%) of the respondents businesses have been in existence between the period of 16-20 years while 16(11.9%) of the respondents business have been existence for over 20 years.

Table 9 the level of education answerers, 18(13.4%) of the answerers have never been to school, 16(11.9%) of the answerers are primary school certificate holders, 13(9.7%) of the answerers are secondary school certificate holders, 21(15.7%) of the answerers are national diploma\ NCE certificate holders, 30(22.4%) of the respondents are B.sc\ HND certificate holders while

36(26.9%) of the answerers are M.sc\PhD certificate holders. Therefore, mainstream of the answerers are B.sc\ HND holders.

Table 10 shows the number of employees in answerer organization. 22(16.4%) of the answerers work with under 5 employees, 48(35.8%) of the answerers work with a size of under 10 employees while 64(47.8%) of the respondents works under the size of 10 and above, making them the majority.

Table 11, 68(50.7%) of the answerers are members of the senior management of their organization, 35(26.1%) of the answerers are members of the middle management of their organization while 31(23.1%) of the answerers are members of the junior management in their organization. The table shows that mainstream of the answerers are senior managers in their organization (Table 12).

About 47(35.1%) of answerers strongly agree that the dealing surroundings in Nigeria is suitable for SMEs, 40(29.9%) of answerers agree that the dealing surroundings in Nigeria is suitable for SMEs, 29(21.6%) of answerers disagree that the dealing surroundings in Nigeria is suitable for SMEs, 13(9.7%) of

respondents disagree. In Nigeria is suitable for SMEs. Therefore, majority of the answerers strongly agree that the dealing surroundings in Nigeria is suitable for SMEs^[11].

Table 13, it shows that 32(23.9%) of the answerers strongly agree that the infrastructure needed for business is readily available in Nigeria, 20(14.9%) of the answerers agree, 21(15.7%) of the answerers are neutral, 33(24.6) of the answerers disagreed and 28(20.9%) of the answerers strongly disagreed. Therefore, majority of the answerers disagree that necessary infrastructure needed for business is easily available in Nigeria. Table 14 shows that 18(13.4) answerers strongly agree that government fiscal and monetary policies favour SMEs in Nigeria, 23(17.2%) answerers agreed, 24(17.9%) answerers were

undecided, 57(42.5%) answerers disagreed while 12(9%) answerers strongly disagreed with administration economic and financial policies. Therefore majority of the answerers disagree that government's financial and economic policies are favourable to SMEs.

Table 15 shows that 57(42.5%) of the answerers strongly agree that microfinance banks play a major role in the provision of credit facilities to SMEs, 36(26.9%) of the answerers agreed. About 8(6%) of the answerers are undecided, 16(11.9%) of the answerers disagreed while 17(12.7%) of the answerers strongly disagreed, therefore, majority of the answerers strongly agree that MFB play a major role in the provision of credit facilities to SMEs^[12, 13].

Table 21 shows that 66 answerers representing 49.3% strongly agree, 52 respondents representing 38.3% agree, 5 answerers representing 3.7% were undecided, 5 respondents representing 3.7% while 6 answerers representing 4.5% strongly disagree that interest rates on loan discourages SMEs from accessing microfinance bank loan. In conclusion, a higher percentage of the answerers strongly agree that interest rate on loan discourages SMEs from accessing bank loans. Table 22 shows that 58(43.3%) were strongly agreed, 58(43.3%)

were agreed, 13(9.7%) were undecided, 2(1.5%) of answerers did not agree while 3(2.2) disagreed strongly that SMEs led to adequately generating jobs. The table above shows that SMEs had an adequate employment. The activities of SMEs have therefore led to a sufficient production of jobs in the majority of the population.

Table, 23 33(24.6%) of the answerers strongly agrees that microfinance banks have played a significant role in the performance of SMEs in Nigeria, 62(46.3%) of the

answerers agreed, 2(15.7%) of the answerers were undecided, 15(11.2%) of the respondents disagreed while 3(2.2%) of the answerers strongly disagreed. Therefore majority of the answerers agreed that microfinance banks have played a major role in the performance of SMEs in Nigeria.

Table 24 shows that 48(35.8%) of the answerers strongly agree that microfinance banks are reluctant to give out loans to SMEs, 62(46.3%) of the answerers agreed, 16(11.9%) of the answerers were undecided while 8(6%) of the answerers disagreed that microfinance banks are reluctant to give out their loans to SMEs. Therefore, the majority of the answerers are of the view that microfinance banks are reluctant to give credit (loans) to SMEs.

Table 25 shows that 50(37.3%) of the answerers strongly agree, 50(37.3%) of the respondents agreed, 21(15.7%) of the answerers were undecided, 10(7.5%) of the answerers disagreed while 3(2.2%) of the answerers strongly disagreed that an increase in microfinance loan to SMEs will increase SMEs performance. Therefore majority of the answerers strongly agreed and agreed that an increase in microfinance loan will increase the performance of SMEs in Nigeria.

Table 26 shows that 31(23.1%) of the answerers strongly agree, 55(41%) of the answerers agreed, 22(16.4%) of the answerers were undecided, 18(13.4%) of the answerers disagreed while 8(6%) of the answerers strongly disagreed that SMES productively utilize credit received from banks.

Therefore, majority of the answerers agreed that SMES productively utilize credit received from banks.

Table 27 shows that 29(21.6%) of the answerers strongly agree, 54(40.3%) of the answerers agreed, 31(23.1%) of the answerers were undecided, 16(11.9%) of the respondents disagreed while 4(3%) of the answerers strongly disagreed that microfinance banks considers SMEs to be of high risk investment. Therefore majority of the answerers agree that microfinance banks consider SMEs to be high risk investment.

Table 27 shows that 26(19.4%) of the answerers strongly agree. About 56(41.8%) of the answerers agree, 31(23.1%) of the answerers were undecided, 15(11.2%) of the answerers disagree and 6(4.5%) of the answerers strongly disagree that government provides adequate public enlightenment programs to educate people on how to run their businesses. In conclusion, a higher percentage of the answerers agree that government provides adequate public enlightenment programs to educate people on how to run their businesses.

Table 28, 59(44%) of the answerers strongly agree, 30(22.4%) of the answerers agree, 26(19.4%) of the answerers were undecided, 13(9.7%) of the r answerers disagree and 6(4.5%) of the answerers strongly disagree that entrepreneurship should be encouraged by providing the necessary facilities needed for their survival. In conclusion, a higher percentage of the answerers strongly agree that entrepreneurship should be encouraged by providing the necessary facilities needed for their survival.

Table 29, 64(47.8%) of the answerers strongly agree, 45(33.6%) of the respondent agree, 17(12.7%) of the answerers were undecided while 8(6%) of the answerers strongly disagree that SME's help in the growth and development of a nation. Therefore majority of the answerers strongly agree that SME's help in the growth and development of a nation.

Table 30 shows that 55(41%) of the answerers strongly agree, 48(35.8%) of the respondents agree, 15(11.2%) of the answerers were undecided, 11(8.2%) of the answerers disagree and 5(3.7%) of the answerers strongly disagree that SME's should be more accountable to enable them get more funds from the financial sector. Therefore majority of the answerers strongly agree that SME's should be more accountable to enable them get more funds from the financial sector, microfinance banks in particular

Table 31 shows that 31(23.1%) of the answerers strongly agree, 61(45.5%) of the answerers agree, 18(13.4%) of the answerers were undecided, 18(13.4%) of the answerers disagree, while 6(4.5%) of the answerers strongly disagree that SMEs lack assets to meet collateral

requirement. In conclusion a higher percentage of the answerers agree that SMEs lack assets to meet collateral requirement.

Test of hypothesis: The hypothesis of the research is therefore tested to ensure that the data collected provided by the responses to the questions in the questionnaire are accepted or rejected within the limits allowed. In order to analyze the hypothesis, the one sample test and reversal analysis will be used (Table 31-37)^[15, 16].

Decision rule: If the value calculated is higher than the value of the critical value, the alternative hypotheses will be accepted and the null calculated. We reject the alternative hypothesis and accept the null hypothesis if calculated is less than the critical or tabled value.

Hypothesis one:

- H₀: there is no link between Microfinance Banks loan and SMEs in Nigeria
- H₁: there is a link between Microfinance Banks loans and SMEs in Nigeria

Table 31: SMES should be more accountable to enable them get more funds from the Financial Sector, Microfinance Bank in particular

^aDependent Variable: MFB plays a major role in the provision of credit facilities to SMEs; ^bPredictors: (Constant), MFB provide adequate advisory services to SMES on investment

Table 37: Coefficients^a

Models	Unstandardized coefficients		Standardized coefficients		
	B	SE	Beta	t-values	Sig.
(Constant)	1.504	0.320		4.704	0.000
MFB provide adequate advisory services to SME's on investment	0.256	0.101	0.216	2.536	0.012

^aDependent Variable: MFB plays a major role in the provision of credit facilities to SMEs

Interpretation: The responses were coded 1, 2, 3, 4 and 5 for strongly agree, agree, undecided, disagree and strongly disagree, respectively. The one-sample t-test above shows a mean value of 2.00 and a standard deviation of 1.01862 with respect to this fact that increase in MFB loans to SMEs will increase SMES performance.

Since the mean is 2, it implies that respondents strongly agree that increase in MFB loan to SMEs will increase SME's performance.

The statistic analysis above reveals that the level of significance is 0.05; the Degree of Freedom (DF) is 133; calculated value 22.160.

Decision rule: In an attempt to discover if there is a relationship between microfinance bank loan and SMEs in Nigeria, the t- test statistics was used. From the above table it is apparent that the calculated value is greater than the tabulated value, therefore, the null Hypothesis (H_0) should not be accepted and the alternative Hypothesis (H_1) should be accepted. Hence, we conclude that there is a relationship between microfinance bank loans and SMEs in Nigeria.

Hypothesis two

- H_0 : microfinance banks do not have significant potential to influence the performance of SMEs in Nigeria
- H_1 : microfinance banks have significant potential to influence the performance of SMEs in Nigeria

RESULTS AND DISCUSSION

The above model synthesis results show that the extent to which the difference in performance of small and medium-sized businesses can be explained by the model of 46% ($R_2 = 0,46$). The F-calculated value in the ANOVA table is 6,430 at the significance level of 0,012. This implies a significant impact for microfinance banks on the performance of Nigeria’s SMEs.

Table 38 shows the simple model in which the extents to which microfinance institutions have a significant influence on the performance of small and medium-sized enterprises. $Y = a + bx$ where y is the performance of SMEs and x is microfinance banks, 'a' is a constant factor and b is the value of the coefficient. Thus $MFB = 1.504 + 0.256$ SMEs from the table. This means that the Microfinance Bank is responsible for 25.6% change in each 100% change in SME performance (Table 39).

Decision rule: The meaning level is 0.12 which is under 0.02, so, it would be accepted that microfinance banks have no significant influence on the performance of small and medium-sized enterprises in Nigeria.

Hypothesis 3:

- H_0 : SMEs do not play an important role in the growth and development of an economy
- H_1 : SMEs play an important role in the growth and development of an economy

Interpretation: The answers were coded 1, 2, 3, 4 and 5 which were very much in agreement. Disagree and disagree with each other strongly. The above sample t-test shows the mean value of 1,83 and a standard deviation of 1,059, compared to the fact that small and medium-sized companies play an important part in economic growth and growth. Because the average is nearer 2, respondents

Table 38: One-sample statistics

Variables	N	Mean	SD	SE mean
SME's help in the growth and development of a nation	134	1.83	1.059	0.091

Table 39: One sample test

Variables	t-values	df	Sig. (2-tailed)	Mean difference	Confidence Interval of the difference (95%)	
					Lower	Upper
SME's help in the growth and development of a nation	19.446	133	0.000	1.778	1.60	1.96

Test value = 0.05

agree strongly that small and medium-sized enterprises play an important role in economic growth and development.

Decision rule: At the level of 0.05, we observe that the value of the tabulated value is below the value calculated for the variable and we therefore refuse the hypothesis of null H_0 and accept the alternative Hypothesis of H_1 . The figure is 19.446^[17].

The decision was to reject the null hypothesis and accept the alternate hypothesis based on one test sample carried out to validate the accuracy of the results for the hypothesis one because the calculated exceeds that which was tabled.

The above analyses of hypothesis two shows that we have accepted the null hypothesis and rejected the alternative hypothesis through the use of linear regression analyzes. The $p = 0.012$ was obtained from the ANVOA table for testing hypothesis. In the case of 0.012 the cut-off point is >0.05 and this has led to the acceptance of the null hypothesis.

CONCLUSION

Two variables were tested from the single t-test analysis for hypothesis 3 which showed that we are rejecting the null hypothesis and accepting the alternative hypothesis. It means that SMEs play an important role in economic growth and development.

RECOMMENDATION

Microfinance banks should encourage their SME’s client to attain higher education as higher education increases SMEs performance. Adult education or long-life learning recommended. Microfinance banks should seek out long term investment from pension and insurance companies. This will permit them to approve long term loan greater number of their SME clients. Microfinance banks should plan suitable product that are bendable to meet the different needs of their SME clients.
