## Contributions to the Moss Flora of Giresun Region (Şebinkarahisar and Alucra District)

T. Özdemir and N. Batan

Department of Biology, Faculty of Arts and Science, Karadeniz Technical University,  
61080 Trabzon, Turkey

**Abstract:** The aim of the study was to obtain knowledge on the moss flora of the Giresun Region-rather than to identify the entire range moss flora of the region. After the identification of 287 moss specimens collected from the research area between June and August in 2007 and 2008, total 85 taxa were defined. These taxa belong to 17 families and 37 genera of *Bryopsida* (Musc). Among them, 14 taxa -*Hygroamblystegium irriguum* Hedw., *Rhynchostegium confertum* (Dicks.) B. S. G., *Rhynchostegium alpinum* Huds. ex With., *Bryum dichotomum* Hedw., *Bryum laevifolium* Syed., *Hygrohypnum smithii* (Sw.) Broth., *Grimmia decipiens* (Schultz) Lindb., *Grimmia tergestina* Tomm. Ex Bruch and Schimp., *Schistidium flaccidum* (DeNot.) Ochyra., *Schistidium platyphyllum* (Mitt.) Kindb., *Palustriella decipiens* (De Not.) Ochyra., *Desmatodon latifolius* (Hedw.) Brid., *Phascum curvicolle* Hedw., *Syntrichia princeps* (De Not.) Mitt. new for A4 grid square (40°- 42' N, 38°- 42' E) which was adopted by Henderson. Thirty six taxa are new for Giresun Province. All taxa are new for study area. For every each taxon, the habitat pattern and distribution data are presented.

**Key words:** A4 grid square, mosses, *Bryopsida*, Turkey

### INTRODUCTION

The study area is in the A4 grid square according to the system adopted by Henderson. No study had previously been made on the moss flora of Şebinkarahisar and Alucra (Giresun) district the area chosen for this study. The region is very interesting in terms of its natural structure and its climate. Its conditions encouraged us to conduct a study on the Bryophyta (Musc).

It is hoped that this study will contribute to the identification of the moss flora of Turkey and be useful as a guide for future studies.

### MATERIALS AND METHODS

Şebinkarahisar is located between Kelkit Valley and Giresun mountains in Eastern part of Black Sea region of Turkey. It is bounded by Alucra, Dereli, Suşehri and Koyulhisar Alucra district in the East where 1618 km<sup>2</sup>, Dereli district in the North where 820 km<sup>2</sup>, Suşehri in the South where 1665 km<sup>2</sup> and Koyulhisar where 968 km<sup>2</sup>. Şebinkarahisar's area is 1378 km<sup>2</sup> and its altitude is 1405 m. The mountains, valleys and mountain pastures covers wide place in Şebinkarahisar district. The well-known mountains of the area are Beldiga Mountain and Egma Mountain. Öksürük Hill is in the North part of

Şebinkarahisar where 1970 m altitude and its South is citadel where 1550 m altitude and Dikmen Hill is in the West where 1758 m altitude, Tutak is in the Northwest where 1544 m altitude. The well-known hills are Duman village where 1300 m altitude, Baltaşı Hill and Sarıkaya Hill where 1912 m altitude (Fig. 1).

Şebinkarahisar has middle Anatolian climate. In this climate, summer is hot and rainless, winter is cold and snowy. Its mountains barriers the winds, the maximum hot month is July, on the other hand, the minimum hot month

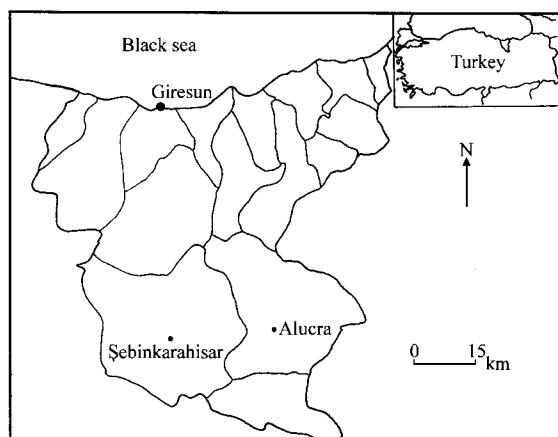

Fig. 1: Map showing the geographical position of the study area

is February. While the maximum rainy month is April, the minimum rainy month is August.

Plant cover of the region is agricultural land where 1378 km<sup>2</sup>. Three thousand two hundred and ninety five ha is vineyards and orchards land, 1054 ha is vegetable garden land, 3954 ha is meadowland, 21747 ha is pasture and mountain pasture, 9385 ha is heavily forested land (*Populus tremula* L., *Abies nordmanniana* (Stev) Spac., *Crataegus pseudoheterophylla* Pojark, *Quercus robur* L., *Quercus petraea* (Mattuschka) Liebl., *Salix viminalis* L., *Pirus elaeagrifolia*, *Rosa canina* L., *Junglans regia* L., *Juniperus communis* L.) and 55680 ha is inactive land. The well-known river is Avutmuş. Its length in district is 40 km. Another river is Darabul. Its length is 20 km. Other river is Çat. Length of Kelkit River's is 40 km. Alucra is located in the South of Giresun province. Gümüşhane province is in the East and Erzincan in the South. It is 131 km at a distance to Giresun. Alucra district is mountain pasture town where 1430 m altitude from Black Sea. Çamoluk is in the South, Şebinkarahisar is in the West, Yağlıdere and Espiye are in the North. Alucra land is mountainous so agricultural land is very less in the region. The well-known mountains are Bedirga mountain where 2333 m altitude, Artabel mountains and Sariyer hills. Its land is fraught with geographic irregularities and there are small valleys between them. Alucra district's well-known rivers are Kelkit and Bağırsak. Other important lakes are Moran and İnce.

Climate of the region is hot in summer and cold and snowy in winter. Contrary to Black Sea climate, Alucra is hot and rainless in summer. The maximum hot month is August. In this month, İncedere's water dries. Alucra district have very rainy in spring. The region have mountain pasture climate in point of plant cover. The mountains hill has very trees but the sides haven't.

The moss samples were collected from 24 localities on 2007 and 2008 in Şebinkarahisar and Alucra (Table 1). The moss specimens were incised by knife or spatula from their habitats. After cleaning, the specimens were preserved in plastic bags, each plastic bag has been labeled a providing the information about the habitat of the area. The bryophyte specimens were dried in shadowy and ventilated room conditions in the laboratory. They have been identified by reference books (Watson, 1981; Frey *et al.*, 1995; Cortini-Pedrotti, 2001; Smith, 2004; Herrnstadt and Heyn, 2004; Jimenez, 2006).

The status of taxa for Turkey was determined by reviewing the related literature (Çetin, 1988a, b; Frey and Kürschner, 1991; Keçeli and Çetin, 2000; Uyar and Çetin, 2004; Papp, 2004; Kürschner and Erdağ, 2005).

The information about the taxa new to A4 square was determined by investigating the studies about A4 square grid. (Özdemir, 1994; Özdemir and Baydar, 1996; Özdemir and Çetin, 1999; Özdemir, 2001a, b; Koz and Özdemir, 2005; Özdemir and Koz, 2006; Abay *et al.*, 2006;

Özdemir and Koz, 2008) Vouchers are deposited in the herbarium of Karadeniz Technical University, Faculty of Science and Arts, Department of Biology.

## RESULTS AND DISCUSSION

The taxonomic survey yielded 85 taxa (*Bryopsida*) belonging to 37 genera of 17 families in the region of Artvin Hatila Valley National Park, Artvin (Turkey). The families seen in Table 2 with high taxa numbers are Pottiaceae (-15), -Brachytheciaceae (15), -Grimmiaceae (14), Bryaceae (10), Amblystegiaceae (5), Campylaceae (5), Hypnaceae (5), Thuidiaceae (4), Bartramiaeae (3), Dicranaceae (2), Orthotrichaceae (2), Mniateae (1), Helodiaceae (1), Leucodontaceae (1), Anomodontaceae (1) (Table 2).

Fifteen-new taxa (*Hygroamblystegium irriguum* Hedw., *Rhynchostegium confertum* (Dicks.) B. S. G., *Rhynchostegium alpinum* Huds. ex With., *Bryum dichotomum* Hedw., *Bryum laeviflum* Syed, *Hygrohypnum smithii* (Sw.) Broth., *Grimmia decipiens* (Schultz) Lindb., *Grimmia tergestina* Tomm. Ex Bruch and Schimp., *Schistidium flaccidum* (DeNot.) Ochyra., *Schistidium platyphyllum* (Mitt.) Kindb., *Palustriella decipiens* (De Not.) Ochyra., *Desmatodon latifolius* (Hedw.) Brid., *Didymodon spadiceus* (Mitt.) Limpr., *Phascum curvicolle* Hedw., *Syntrichia princeps* (De Not.) Mitt. recorded from the research area for A4 square.

Thirty six taxa (*Amblystegium serpens* var *serpens* (Hedw.) Schimp., *Amblystegium riparium* (Hedw.) Br. Eur., *Crataneuron filicinum* (Hedw.) Spruce, *Hygroamblystegium irriguum* Hedw., *Philonotis*

*calcarea* (Bruch and Schimp.) Schimp., *Philonotis tomentella* Molendo. *Homalothecium philippianum* (Spruce) B.S.G., *Rhynchostegium confertum* (Dicks.) B.S. G., *Bryum alpinum* Huds. ex With., *Bryum caespiticum* Hedw., *Bryum creberrinum* Tayl., *Bryum dichotomum* Hedw., *Bryum imbricatum* (Schwaegr.) B. S. G., *Bryum laeviflum* Syed, *Bryum torquescens* Bruch ex De Not., *Drepanocladus aduncus* (Hedw.) warnst., *Drepanocladus uncinatus* (Hedw.) Warnst., *Hygrohypnum smithii* (Sw.) Broth., *Encalypta streptocarpa* Hedw., *Grimmia decipiens* (Schultz) Lindb., *Grimmia elongata* Kaulf. *Grimmia laevigata* (Brid.) Brid., *Grimmia ovalis* Auct., *Grimmia pulvinata* (Hedw.) Sm., *Grimmia tergestina* Tomm. Ex Bruch and Schimp., *Schistidium flaccidum* (De Not.) Ochyra., *Schistidium platyphyllum* (Mitt.) Kindb., *Schistidium trichodon* (Brid.) Poelt., *Palustriella decipiens* (De Not.) Ochyra., *Hypnum revolutum* (Mitt.) Lindb., *Orthotrichum affine* Schrad ex Brid., *Ulota crispa* (Hedw.) Brid., *Anoectangium aestivum* (Hedw.) Mitt., *Desmatodon latifolius* (Hedw.) Brid., *Phascum curvicolle* Hedw., *Syntrichia princeps* (De Not.) Mitt., *Syntrichia ruraliformis* (Besch.) Cardot, *Syntrichia ruralis* (Hedw.) F. Weber and D.Morh., *Tortula intermedia* (Brid.) De Not., *Tortula muralis* var. *muralis* Hedw., *Crataneuron filicinum* (Hedw.) Spruce) are new for Giresun province (Özdemir, 2001 a, b; Koz and Özdemir, 2005; Özdemir and Koz, 2006; Özdemir and Koz, 2008).

In the following records the taxa name is followed by the number of locations and substrate. The plant list is given according to the system proposed by Smith 2004. The asterisks mark the species that have been first recorded from the A4 grid square (Table 3).

Forty nine taxa were found growing on the rocks. Members of the mosses preferred to grow predominantly on stones and rocks depending on data obtained from the study area. The samples growing on the rocks are 57.65% of all samples These are; *Amblystegium riparium* (Hedw.) Br.Eur., *A. varium* (Hedw.) Lindb., *Crataneuron filicinum* (Hedw.) Spruce, *Drepanocladus uncinatus* (Hedw.) Warnst., *Hygroamblystegium tenax* (Hedw.) Jenn., *Palustriella decipiens* (De Not.) Ochyra. *Brachythecium albicans* (Hedw.) Schimp., *Eurhynchium striatum* (Spruce) Schimp., *E. striatum* (Schreb. ex Hedw.) Schimp., *Homalothecium lutescens* (Hedw.) H. Rob., *H. nitens* (Hedw.) H. Rob., *H. philippianum* (Spruce) B.S.G., *H. sericeum* (Hedw.) Schimp., *Bryum capillare* Hedw., *B. imbricatum* (Schwaegr.) B. S. G., *Philonotis calcarea* (Bruch and Schimp.) Schimp., *P. fontana* (Hedw.) Brid., *P. tomentella* Molendo., *Dicranum polysetum* Sw., *Grimmia tricophylla* Grev., *G. decipiens* (Schultz) Lindb., *G. donniana* Sm., *G. elongata* Kaulf., *G. hartmanii* Schimp., *G. laevigata* (Brid.) Brid., *G. ovalis* auct., *G. pulvinata* (Hedw.) Sm., *G. terpestina* Tomm. Ex Bruch and Schimp., *Schistidium apocarpum* (Hedw.) Bruch and

\*DT: Died Tree body, T: Tree body, R: Rock, S: Soil, WR: Wet Rock, WS: Wet Soil

Table 4: The distribution of taxa in habitats

NH	Habitats	NT	(%)
1	Wet rock	5	5.88
2	Rock	49	57.65
3	Soil	13	15.29
4	Wet soil	6	7.06
5	Tree body	8	9.41
6	Died tree body	4	4.71
	Total	85	100.00

(NH: No. of habitats, NT: No. of taxa, (%): percentage of taxa according to the total No. of taxa)

*spinosum* (Voit.) Schwagr., *Didymodon vinealis* (Brid.) R.H. Zander., *Tortula muralis* var. *muralis* Hedw (Table 4).

Six taxa were found growing on wet soil. The samples growing on wet soil 7.06% all samples

(Table 4). These are; *Brachythecium rivulare* (Schimp.) B.S.G., *Bryum alpinum* Huds. ex With., *B. creberrinum* Tayl., *B. dichotomum* Hedw., *B. pallescens* Schwaegr., *Didymodon acutus* (Bridel) K. Saito (Table 4).

Eight taxa were found growing on tree body (on *Abies nordmanniana* (Stev) Spac, *Quercus robur* L., *Quercus petraea* (Mattuschka) Liebl., *Junglans regia* L., forest). These are 9.41% all Samples (Table 4). (*Brachythecium glareosum* (Spruce) Schimp., *B. mildeanum* (Schimp.) Schimp., *Rhynchostegium confertum* (Dicks.) B.S.G., *Barbula unguiculata* Hedw., *Encalypta streptokarpa* Hedw., *Phascum curvicolle*

Hedw., *Syntrichia princeps* (De Not.) Mitt., *Orthotrichum affine* Schrad ex Brid (Table 4).

Six taxa were found growing on died tree body. These are 4.71% all samples (Table 4). These are; *Amblystegium serpens* var *serpens* (Hedw.) Schimp., *Brachythecium plumosum* (Hedw.) B.S.G., *Didymodon asperifolius* (Mitt.) Crum *et al.*, *Syntrichia intermedia* Brid., *Ulota crispa* (Hedw.) Brid., *Orthotrichum affine* Schrad ex Brid (Table 4).

Dominated families of the regions are Pottiaceae (15), Brachytheciaceae (15), Grimmiaceae (14), Bryaceae (10). These families make up 63.52% of the total taxa in this study and the other 11 families constitute 36.48% (Table 3).

In Table 5 and 6 a comparison between studies carried out in the Black Sea region and the Mediterranean show that the proportion of acrocarpous mosses in the

Mediterranean is higher than that in the Black Sea region, especially, the No. of taxa of Pottiaceae family members is higher than the number of taxa of Brachytheciaceae family members in this study areas. Since acrocarpous species have quillledged leaves and grow in cushion form, they can endure long periods of heat and dryness better than pleurocarpous species in the Black Sea region.

The study area is in the northeast of Anatolia. Pottiaceae family that displayed acrocarpous growth and have the largest number of taxa and rich group determined the study area. In terms of number of taxa was Brachytheciaceae family and this family displayed acrocarpous growth. Because in the study area, which has a semiarid and very cold Mediterranean bioclimatic in contrast with the studies corresponding to coastal of the Black Sea region.

Table 5: A comparison between the studies carried out in the Black Sea region
